SUMMARY

iOS developer who builds iPhone apps with Swift, SwiftUI and UIKit. At Zapplogics I work on production apps for clients and take part in their App Store releases, so I know the process from TestFlight through App Review. As an intern I migrated a bilingual English/Arabic app from UIKit to SwiftUI. I care about clean MVVM code, stable releases and working closely with designers and QA.

EXPERIENCE

iOS Developer, Zapplogics Solution LLP Sep 2025 – Present

- Take part in App Store releases for client apps through TestFlight and App Store Connect.
- Build and maintain features in Swift with SwiftUI and UIKit, following an MVVM architecture.
- Integrate REST APIs and Firebase services, including Authentication, Firestore, Storage, Analytics and push notifications.
- Create reusable UI components and shared modules so common screens are not rebuilt for every project.
- Find and fix crashes, UI bugs and performance problems before release, working alongside QA engineers.
- Work with designers and backend developers from planning through to release.

iOS Developer Intern, Rudra IT Network Jul 2025 – Aug 2025

Asuaaq: buy-and-sell classifieds app in English and Arabic

- Migrated the app from UIKit to SwiftUI, rebuilding its screens on an MVVM architecture.
- Continued feature work and maintenance on the new SwiftUI codebase after the migration.
- Connected the app to REST APIs and Firebase for listing data and backend communication.
- Implemented English and Arabic localization, including right-to-left layouts.
- Fixed SwiftUI and API integration bugs, making the app more stable and easier to maintain.

PROJECTS

HydraPet, personal iOS app In development

- Building a hydration tracker where an animal companion fills with water as the user drinks, with 13 drink types weighted by how hydrating they are.
- Wrote streak rules keyed to the user's local calendar day, so midnight, time-zone changes and an unfinished day never break a streak unfairly.
- Structured the app as SwiftUI views with @Observable view models, a service layer and repositories over SwiftData.
- Wrote 90 unit tests with Swift Testing, using an injectable clock to test behaviour across midnight.
- Next: home-screen widgets, StoreKit 2 purchases and translations for 8 languages.

Tech: SwiftUI, @Observable, SwiftData, Swift Testing, UserNotifications, MVVM, iOS 18

SKILLS

Languages & UI	Swift, SwiftUI, UIKit, MVVM, Combine, Observation (@Observable)
Concurrency & data	Swift Concurrency (async/await, Task, actors), Codable, JSON, SwiftData, Core Data, UserDefaults, @AppStorage
Backend & services	REST APIs, Firebase (Authentication, Firestore, Storage, Analytics), push notifications
App Store delivery	App Store Connect, TestFlight, StoreKit 2, in-app purchases
Other	Localization (English/Arabic, RTL), unit testing with Swift Testing, debugging, performance optimization
Tools	Xcode, Git, GitHub, Swift Package Manager, AI coding tools (Claude, Cursor, Codex, Antigravity)

EDUCATION

Bachelor of Computer Applications (BCA), Chaudhary Charan Singh University, Meerut Jun 2025

CERTIFICATIONS

Complete iOS 16 Developer with SwiftUI and 10 Apps, Udemy Jul 2025
