## iOS Developer

js32640@gmail.com | +91 84397 48407 | linkedin.com/in/jatinsaini07

### SUMMARY

iOS Developer with **1+ year of experience** building production iOS applications, leveraging AI-driven development to improve productivity and deliver reliable user-focused features. Experienced in API integration, debugging, and App Store releases, with a focus on clean and maintainable code.

### EXPERIENCE

**iOS Developer, Zapplogics Solution LLP** Sep 2025 – Present

- Develop and maintain production iOS applications using **Swift, SwiftUI, UIKit**, and MVVM architecture.
- Support the release lifecycle through **TestFlight and App Store Connect**, including build distribution and App Review preparation.
- Integrate REST APIs and Firebase services including Authentication, Firestore, Storage, Analytics, and push notifications.
- Investigate and resolve crashes, UI defects, and performance issues in collaboration with QA to improve release stability.

**iOS Developer Intern, Rudra IT Network** Jul 2025 – Aug 2025

- Worked on Asuaaq, a buy-and-sell classifieds iOS application live on the App Store.
- Migrated the application from **UIKit to SwiftUI** and rebuilt screens using MVVM architecture.
- Integrated REST APIs and Firebase for listing data and backend communication.
- Implemented English and Arabic localization with right-to-left (RTL) layouts.

### PROJECTS

**Linkle – social planning iOS app** Personal project

- Built a native SwiftUI app for discovering, joining and hosting small local plans, with group chat, profiles and subscriptions.
- Structured it as feature-based MVVM with **@Observable** view models, repositories, environment-based DI and typed **NavigationStack** routing with deep links.
- Built real-time group chat on **Firebase Realtime Database** with optimistic sending, an offline outbox, polls and security rules, plus waitlist and last-spot race handling.
- Integrated MapKit, CoreLocation, EventKit, PhotosUI and Sign in with Apple.
- Wrote **unit tests with Swift Testing** for business rules such as waitlists, plan states and polls.

**HydraPet – hydration-tracking iOS app** Personal project · In development

- Building a SwiftUI hydration app where an animal companion fills up as the user drinks, across 13 weighted drink types.
- Implemented calendar-day streaks with Bounce Back, challenges, unlockable companions, weekly insights and reminders.
- Added SwiftData persistence, live Arabic RTL switching, and unit tests for streaks and day boundaries.

### SKILLS

|                      |                                                                                                               |
|----------------------|---------------------------------------------------------------------------------------------------------------|
| Languages & UI       | Swift, SwiftUI, UIKit, MVVM, Combine, Observation (@Observable)                                               |
| Concurrency & data   | Swift Concurrency (async/await, Task, actors), Codable, JSON, SwiftData, Core Data, UserDefaults, @AppStorage |
| Backend & services   | REST APIs, Firebase (Authentication, Firestore, Realtime Database, Storage, Analytics), push notifications    |
| App Store delivery   | App Store Connect, TestFlight                                                                                 |
| Frameworks & testing | MapKit, EventKit, localization (English/Arabic, RTL), Swift Testing, debugging, performance optimization      |
| Tools                | Xcode, Git, GitHub, Swift Package Manager, AI coding tools (Claude, Cursor, Codex, Antigravity)               |

### EDUCATION

**Bachelor of Computer Applications (BCA)**, Chaudhary Charan Singh University, Meerut Jun 2025

### CERTIFICATIONS

**Complete iOS 16 Developer with SwiftUI and 10 Apps**, Udemy Jul 2025
